For the rear shock, start at about half of your rider weight for air pressure. You will have to adjust from here, but you will want to achieve the proper SAG for your frame, as recommended by your frame manufacturer. Typically this is somewhere between 30-40% of overall travel. Check out this tutorial video for SAG setting and tuning.

Some RockShox forks have an air pressure chart printed on the back of the non-driveside fork leg, or in the fork User Manual. If this information is not available, skip to the next section, Setup Using Sag. The following steps will show you how to perform a quick spring setup using the air pressure chart.

~~Dual Air Spring Tuning Guide 2001 — 2012~~

Rockshox added a shim stack above the low speed rebound ' s adjuster needle, which serves two purposes. First, it acts like a check valve to stop flow from going the wrong way. Which means that when you hit something or press down on the bike, oil can ' t flow backwards through the rebound circuit.

~~Senateallstar on Pinkbike~~

RockShox is one of the market leaders when it comes to suspension, having provided front forks and rear shocks to mountain bikers for almost 30 years. RockShox released the first-ever mountain bike suspension fork , in 1990, called the RS-1 — it had two-inches of travel and was essentially a downsized motocross fork.
