The endocrine system is everywhere and the chemicals produced by the system act in a variety of ways on every cell of your body. The circulatory system is the transport system for endocrine information. While the nervous system uses neurons, the endocrine chemicals and hormones most circulate through the body via blood vessels. Excretory System

Body Systems Unit Test Study Guide

System. In a system, network of components work towards a single objective, if there is lack of co-ordination among components, it leads to counterproductive results. A system may have following features: Adaptability: some systems are adaptive to the exterior environment, while some systems are non-adaptive to the external environment. For example, anti-lock braking system in car reacts depending on the road conditions, where as the music system in the car is independent of other happening ...
